EDUCATION

Georgia Institute of Technology - Bachelors of Science, Computer Science, | **GPA 3.83 / 4.0** | **May 2028**

- **Concentration** - Intelligence & People; **Honors** - Presidential Scholar, Dean's List, Zell Miller Scholarship

Relevant Courses - Data Structures, Algorithms, Database Mgmt., Software Development, Linear Algebra, Discrete Math

EXPERIENCE

ConventionConnection, Software Engineer Intern; Atlanta, GA **December 2025 - Present**

- Engineering an AI-powered image processing pipeline using OpenCV and FastAPI to automate card photo cropping, reducing manual processing time by **75%** and managing **1,000+** images via Google Photos API on GCP
- Architecting pricing engine and auction monitor in Python with **20** rules and real-time bid tracking across marketplaces
- Developing full-stack features with React frontend and FastAPI backend services, deployed on Render and Vercel

University of Georgia, Undergraduate Researcher; Athens, GA **September 2025 - Present**

- Developing high-performance spectral preprocessing algorithms in Python for signal normalization and noise reduction, optimizing computational throughput by **25%** across high-dimensional datasets for downstream ML models
- Architecting robust, modular data pipelines to automate raw spectral data transformation into analysis-ready formats
- Implementing programmatic verification systems using NumPy, SciPy to validate signal accuracy across data lifecycle

AlgoVerse AI, Software Engineer (Research) Intern; Remote **September 2025 - March 2026**

- Developed a novel multi-task benchmark evaluating LLMs' vision-based tool use capabilities in geolocation reasoning tasks, architected evaluation frameworks that test spatial reasoning; preparing paper for submission to **COLM 2026**
- Built an automated data collection and experimentation pipeline using Python, Selenium, and Google Street View API, processing **300+** diverse global locations with programmatic verification systems for benchmark question validation
- Refactored prototype codebase into a production-ready repository with CI/CD integration, implemented **50+** automated tests and type checks that reduced setup time by **20%** and enabled reproducible one-command execution

PROJECTS

Switch - Multi-AI Model Platform **February 2026**

- Built a full-stack multi-AI model site that enables users to switch between different AI models without losing context
- Developed a unified backend routing system using Next.js and TypeScript to standardize disparate API schemas; implemented custom middleware to transition and maintain consistent message formatting across model switches
- Engineered a scalable PostgreSQL schema via Supabase to manage nested chat hierarchies and message metadata; implemented efficient indexing to ensure low-latency retrieval of conversation histories across persistent user sessions

VesselNav - Full-Stack Educational Platform **October 2025**

- Developed a web platform with React and D3.js visualization for cardiovascular anatomy study with interactive search
- Implemented bidirectional BFS algorithm using PostgreSQL recursive CTEs for shortest path calculations through vascular network graphs, optimizing complexity with cycle detection across **200+** vessel connections
- Built production Spring Boot REST API with PostgreSQL, JPA for entity mapping, Flyway for schema versioning, and Docker containerization; deployed to Vercel with automated CI/CD achieving sub-**200ms** response times

TECHNICAL SKILLS & INTERESTS

Languages | Java, Python, C++, JavaScript, TypeScript, SQL, Bash

Frameworks | React, Next.js, Streamlit, FastAPI, JavaFX, Flask, MongoDB, Node.js, D3.js

Tools/Libraries | Git, GitHub, Linux/Unix, CI/CD, AWS, Vercel, Docker, OpenCV, PostgreSQL, Maven, PyTorch, JUnit

Awards | Presidential Scholar (4.0 GPA), Dean's List, AP Scholar Award, NHS, 2021 Tennis State Championship

Interests | Tennis, Weightlifting, Running, Basketball, Pickleball, Poker, Investing
